

Sustainability is a key consideration for all management decisions in the park. Through improved conservation practices staff have greatly reduced water and energy use. The green lawns that consumed more than two-thirds of our water supply in years past have mostly been replaced with native plants that require no supplemental watering. We are also diversifying our energy sources with this photovoltaic array which produces 30-40% of the park's energy requirements.

We thank you for doing your part to reduce the amount of waste that goes into our local landfill by packing it out or taking the time to sort and recycle materials in our recycling center in the campground. And last but not least, we thank you for literally “walking the talk” by choosing to use this sidewalk instead of driving the car!

Walking the Talk

This photovoltaic array installed in 2010 will provide sustainable and clean energy for many years to come.
